REMTECH customers' addresses can be obtained upon request.

NOTES:

All systems are listed in chronological order of first purchase. PA (“Phased Array”) Sodars can appear anywhere in the list because over 60 customers have upgraded their old REMTECH A() three cones type of system with a REMTECH PA type. They were offered special conditions.

A few years ago we were able to tremendously improve the Sodar software (as a result of years of efforts which were initiated back in 1996) and we have therefore decided to discontinue the PA1 and PA2 models and produce only the PA0 and PA5. Also we have introduced recently our very small PA-XS Sodar.

SC: stands for self contained.

This is our new design with a very small electronic/computer case fixed underneath the antenna. This case is low power, withstands all weather conditions, and includes GPS, WiFi, dual component inclinometer, digital compass as well as pressure, temperature and humidity sensors. Wireless modem and/or satellite connections are available.
